

The position of a fish's mouth tells us where and what they eat. By looking at the fish below, can you tell whether they feed from the **top**, **middle**, or **bottom** of the Lake?

Top feeders: 1. Largemouth Bass, 2. White Crappie;  
Middle feeders: 3. Yellow Perch, 4. Walleye; Bottom feeders: 5. Channel Catfish, 6. Lake Sturgeon

# GREAT LAKES

**F**ind and color the **snake**, **duck**, **frog**, **fish** and **turtle** in the wetlands above.

## Fun Facts

Wetlands are places where the soil is full of water at least part of the year. Wetlands have many functions in nature:

- They provide homes and food for many plants and animals.
- They help clean the water.
- They work as sponges and soak up extra water to help prevent flooding.
