Stone Lab's REU Program

Students from all over the country have taken advantage of the Stone Lab Research Experience for Undergraduates (REU) Scholarship Program. Supported by three endowments, this highly competitive program puts future scientists into the field to learn how to conduct research on Lake Erie's most pressing issues.

Since its start in 2005, the REU Program has funded \$150,000 to over 50 students, many of whom have gone on to graduate school with a science research focus or awarded NSF Graduate Research Fellowships.

Training Future Scientists
